Serialisation Solutions

Tackling counterfeiting and facilitating traceability throughout the manufacturing and distribution supply chain, our expert multi-disciplinary serialisation team lead the way in supporting clients in developing their serialisation strategies in line with global requirements to GS1 standards.

Securing your supply chain

Fully flexible serialisation solutions meeting your needs as part of a pack process, a repackaging exercise, or as a stand-alone serialisation application to already packed product.

With over 8 years' experience, we provide flexible and adaptable serialisation solutions in line with client serialisation strategies and global requirements.

Permitting traceability of drug products in accordance with country legislation, from our UK and US commercial facilities we can generate, allocate and upload unique numbers applied to products at each stage of the packaging process, from the saleable item level through to pallet level aggregation.

Helping to secure your supply chain we offer:

- Serialisation strategy consultative services
- Design, review & generation of new artwork (if needed)
- Technical / Prototype testing
- Flexible serialisation / track & trace solutions for all pack formats
- Serialisation to 3 levels of aggregation
- Integration with external providers to support serialisation management and Government reporting as required

With EU and FDA approved commercial manufacturing and packaging facilities, we are able to provide end-to-end solutions for your drug product helping you meet commercial supply timelines, mitigate risk and reduce overall product costs whilst helping to secure your supply chain.
