

The clear choice for a better IRT experience

Let's not complicate things. If you've got a straightforward study, you can leverage the power of the industry's leading IRT platform combined with Almac Clinical Technologies' experience and support - without the time, cost, and commitment associated with a heavily customised approach.

Simplify™ is the result of analysing over 3,000 clinical trial protocols to identify common functionality available for consolidation into a pre-validated and configurable ecosystem available for rapid deployment. And thanks to our flexible software development methodology, Simplify can be ready to go live in just four weeks!

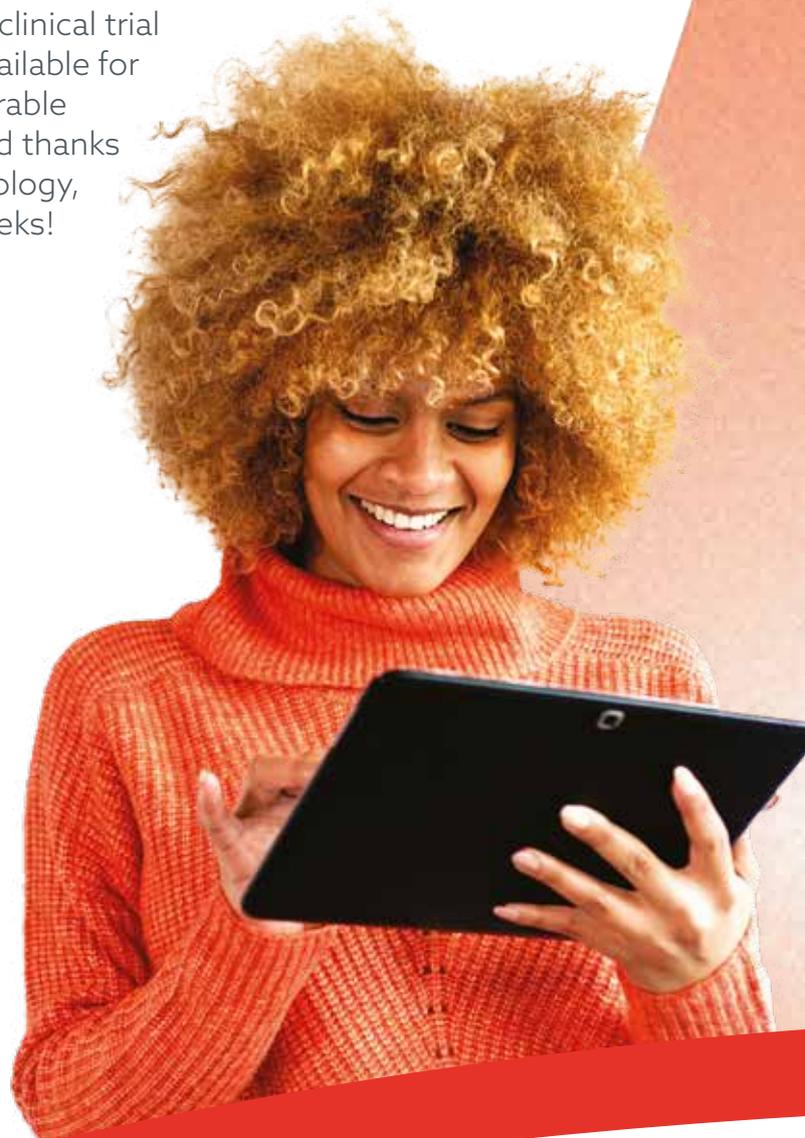

The ideal application for Simplify

- Studies that don't have a foreseeable "adaptable" component to them i.e., the protocol is not open ended
- Straightforward studies for which start-up speed is of the essence
- Our specialists will consult with you to confirm the suitability of Simplify for your trial.

Automation to manage patients and supplies

Simplify helps you make decisions throughout the trial to ensure patient safety, optimise processes and reduce risk. The pre-configured software supports you and sites throughout the clinical trial by:

- Randomising patients
- Managing multiple cohorts
- Automating drug assignments
- Tracking and ordering supplies
- Monitoring progress through alerts and dashboards

An expandable core

What makes Simplify different from other configurable IRT solutions is that you're never "locked in." If unexpected protocol amendments become a reality after your initial system is delivered, it's no problem. Almac Clinical Technologies will rapidly and safely layer the necessary customisations into Simplify using a validated software delivery methodology.

Flexible support models

We'll provide an experienced Project Manager to oversee your system for the duration of the study. And, Simplify includes Almac Clinical Technologies' industry-leading, full technical support available via a 24/7/365 live Help Desk. Should your support needs change at any time, your Project Manager will work with you to identify the appropriate level and adjust your model accordingly.

Study intelligence in real time

Simplify gives you visibility to key metrics so that you can quickly intervene to keep the trial on course. Features include:

- Dashboards on key milestones, study conduct, and progress – all at a glance
- Alerts triggered when milestones or thresholds are met, or when values fall outside of a desired range (such as patient screening quotas, drug inventory levels, and expiry dates)
- A standard suite of 29 pre-built reports on key performance indicators (KPIs)

Easy integrations with third-party systems

We've anticipated the type of integrations that you'll need and have pre-built connectors to make integrations with other systems quick and easy.

Self-service capabilities

Site administrators can manage updates to user accounts on their own, without having to turn to you or Almac.

Streamlined, yet powerful

Simplify has most of the capabilities of a customised IXRS[®] 3 system and offers these advantages:

- **Rapid development.** Simplify will be ready for your study in as little as four weeks
- **Low-touch start up.** You devote minimal time to defining requirements, and specification documents are a quick read
- **Flexibility to customise if needed.** If your protocol or study objectives change, Simplify adapts as you need it to
- **Affordable and predictable pricing.** Simplify is available at one flat rate that reflects our consolidated process

What Simplify can do for you

Simple, powerful tools for Clinical Supply Management: Visibility into – and power over – the entire flow of supplies:

- Create and manage dynamic supply strategies based on real-time, actual product usage rates and current forecasts, rather than pre-trial assumptions
- Supplies 'AutoPilot' mode to intelligently and automatically manage supply ordering and re-ordering, or quickly switch to manual mode to support high enrolling sites, preserve costly biologics, or carefully dole out those in short supply

We partner with you to deliver constant innovation, risk reduction, and improved economies of scale that transform your global performance.

Please contact us to see if Simplify might be the ideal IRT for your study. We'll showcase the system and review your study objectives and protocol with you to determine the right approach.
