

**IXRS[®]**
UNIVERSITY

IRT Training & Certification

IXRS[®] University provides users with on demand web-based training. The training modules are designed to educate users on the most important aspects of using the IXRS[®]. Educated users are less likely to make mistakes which leads to higher quality system data.

Do I need IRT training and certification for my studies?

Training is required for all individuals involved in conducting clinical trials, which includes the use of computerised systems such as IRT. Regulatory guidelines recommend that training is documented and available for auditing and inspection purposes. This built in solution provides an automated mechanism that ensures each user is trained prior to system use; removing manual processes.

As IXRS[®] University is fully integrated with the IXRS[®]3 application, users will be required to complete training prior to gaining access to and completing transactions within each study. Upon completion of training, users will not only gain access to the study but have a certificate available for download. Certification information will also be available to sponsors, providing the necessary documentation to meet regulatory requirements.

Log on validations for gated access to IXRS[®]

Validated system (21 CFR part 11 compliant)

Study level training compliance reporting

Available at study go live

User certification provided

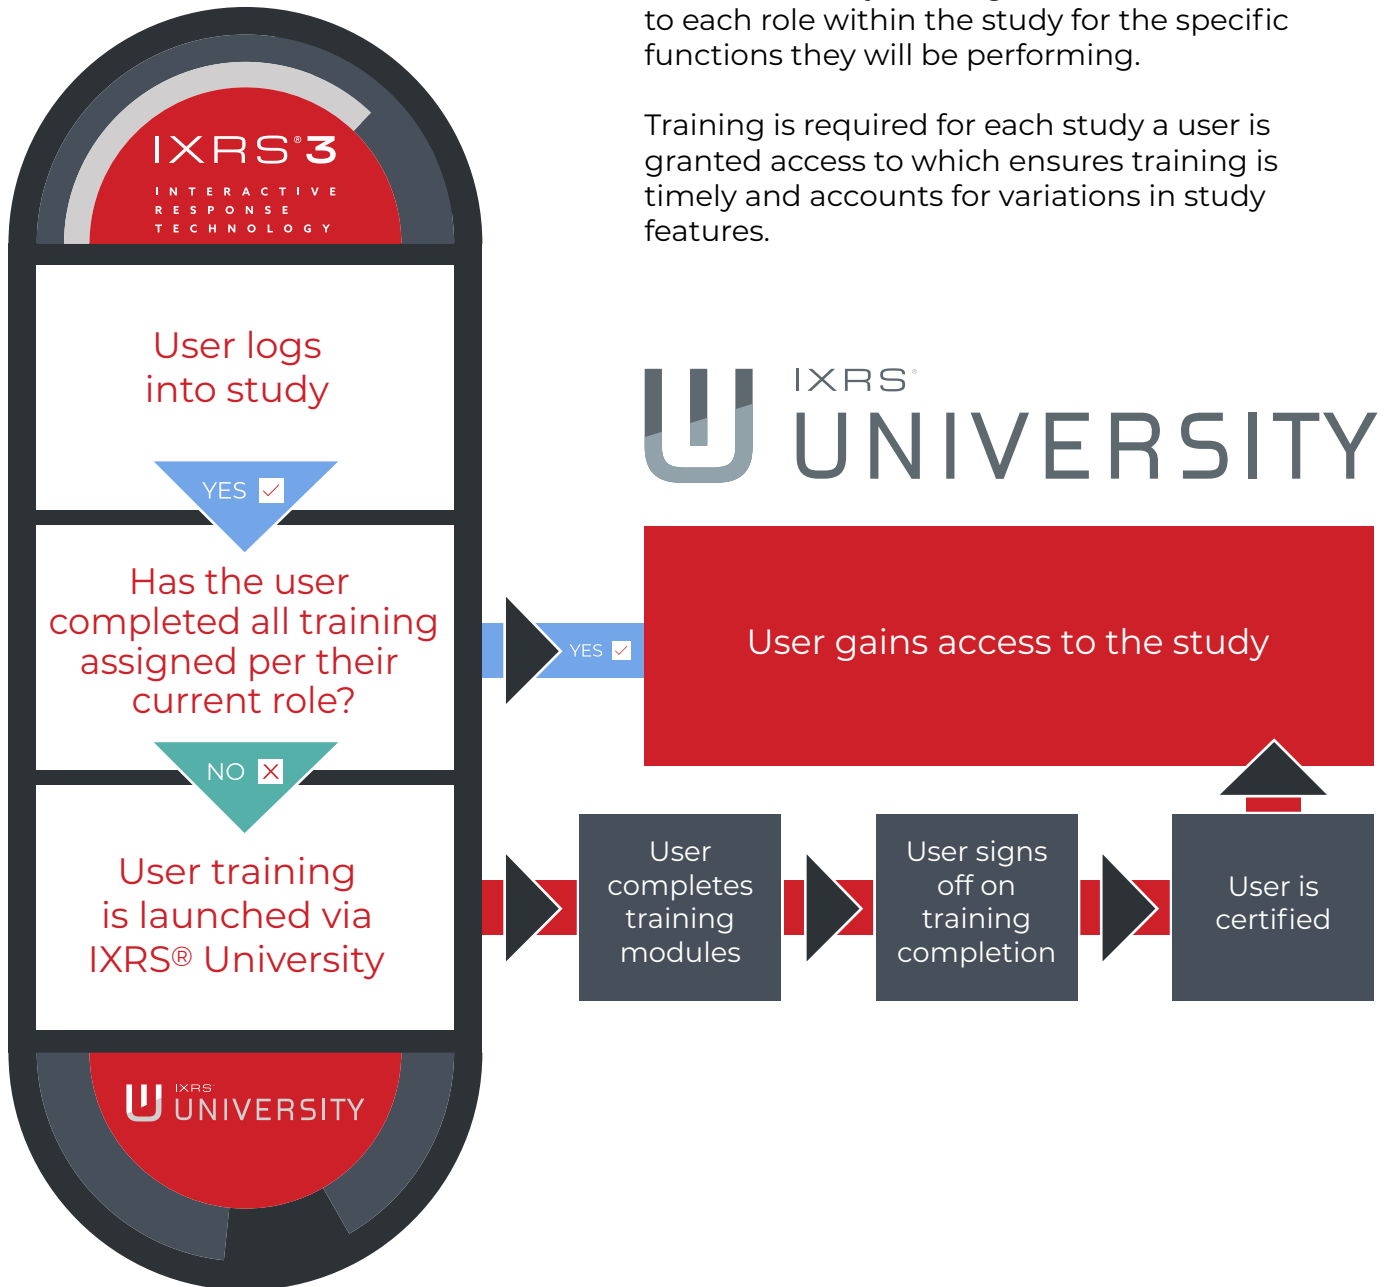

All external roles can be configured to require IXRS[®] University training

Training assignment and workflow

IXRS® University training content will be tailored to each role within the study for the specific functions they will be performing.

Training is required for each study a user is granted access to which ensures training is timely and accounts for variations in study features.
