

Featuring all
Hallmarks of Cancer

Complex biologies,
intelligently simplified.

clara^T is a unique software-driven solution, classifying biologically relevant gene expression signatures into a comprehensive, easy-to-interpret report.

clara^T benefits at a glance:

- Maximises the understanding of your dataset
- Provides readouts for the most relevant published gene expression signatures
- Standardises comparisons between different datasets
- Highlights consensus between multiple gene expression signatures
- Provides extensive supplementary data for innovative analysis
- Multiple signatures from a single tumour sample
- Cost effective solution, saving analysis time

The opportunity created by RNA-Sequencing:

- RNA-Sequencing (RNA-Seq) is an untapped resource for biomarker discovery and development in oncology enabling the discovery and validation of an endless combination of gene expression signatures
- Gene expression signatures are more dynamic than DNA based biomarkers and better reflect changes in biology as a tumour adapts to multiple treatments
- RNA-Seq can also be used for detection of novel gene fusions and alternative transcripts

Hannah Millar, Senior Laboratory Scientist

The challenges of RNA-Sequencing:

However, there are some inherent challenges with high throughput RNA-Seq. These include:

- Complex data outputs that require advanced computational bioinformatics pipelines to develop and validate robust gene expression assays
- Analysis of multiple signatures and biologies can be time consuming, requiring significant bioinformatics / statistical resource
- There are still no PMA approved gene expression assays creating a potential regulatory risk for companies considering this approach

clara^{T*} Report:

clara^T is a unique reporting solution to help cancer researchers overcome the challenges associated with RNA-Seq and analysis. Samples can be sent to Almac's Labs for processing and automated generation of the clara^T report.

clara^T classifies publicly available gene expression signatures and single gene targets linked to multiple key biologies, alongside Almac's own proprietary assays, according to the 10 Hallmarks of Cancer. Originally published by Douglas Hanahan and Robert Weinberg in 2000. Clients are provided with a unique, interactive report that allows the easy visualisation of the key discriminating biologies within both the study cohort and an individual tumour sample.

A pan-cancer solution, based on a powerful bioinformatics pipeline, automatically generating the clara^T report from raw gene expression data utilising our Next Generation Sequencing (NGS) service.

* clara^T is for research use only (RUO) and is not to be used for diagnostic or prognostic purposes, including predicting responsiveness to a particular therapy

clara^T - Utilising the Hallmarks of Cancer:

First conceptualised by Douglas Hanahan and Robert Weinberg in 2000 and subsequently updated in 2011, the **Hallmarks of Cancer** have become a paradigm within modern cancer research. The hallmarks help explain the complexity of cancer cells and describe the processes that occur allowing cancer cells to proliferate and grow if unchecked.

The clara^T report utilises the Hallmarks of Cancer concept of targetable biologies to help facilitate biomarker discovery. clara^T embodies the tenets set out by the authors, intelligently simplifying the complex biologies of cancer within key hallmarks.

clara^T Report - Facts:

clara^T content:

Immuno-Oncology

14 signatures

- Almac I-O Assay
- 5 x TCGA Subgroups
- 2 x TILs Signatures
- 2 x Immune Resistance Signatures
- 1 x T-cell Signature
- 1 x IFN γ Signature
- 1 x TGF β Signature
- 1 x Immune Enrichment Score

EMT

12 signatures

- Almac EMT Assay
- 5 x EMT Pan-Can Signatures
- 2 x Stromal Signatures
- 1 x MAPK Activity
- 1 x Mesenchymal Subgroup
- 1 x MEK Functional
- 1 x EMT Enrichment Score

Inflammation

10 signatures

- 4 x Macrophage Signatures
- 2 x NF κ B Signatures
- 2 x Inflammatory Response Signatures
- 1 x IL1 β Signature
- 1 x Inflammatory Response Enrichment Score

Genome Instability

10 signatures

- Almac DNA Damage Assay
- 2 x BRCA Signatures
- 2 x DDR Signatures
- 2 x Chromosomal Instability Signatures
- 1 x HRD Signature
- 1 x MSI Signature
- 1 x DNA Damage Enrichment Score

Proliferation

10 signatures

- 2 x HER2 Signatures
- 2 x EGFR Signatures
- 2 x MAPK Activity
- 1 x KRAS Signature
- 1 x MYC Activity
- 1 x STAT3 Signature
- 1 x PI3K/AKT Enrichment Score

Angiogenesis

9 signatures

- Almac Angio Assay
- 4 x Angio Subgroup
- 1 x Hypoxia Signature
- 1 x Vascular Proliferation Signature
- 1 x Angio Predictive Signature
- 1 x Angio Enrichment Score

Energetics

8 signatures

- 3 x Glycolysis Signatures
- 2 x Hypoxia Signatures
- 1 x Metabolic Progression Signature
- 1 x Fatty Acid Metabolism Signature
- 1 x Oxidative Phosphorylation Enrichment Score

Evading Growth

7 signatures

- 2 x E2F Regulation Signatures
- 1 x Cell Cycle Signature
- 1 x CDK4 Classifier
- 1 x RB-loss Signature
- 1 x TP53 Signature
- 1 x G2M Checkpoint Enrichment Score

Cell Death

7 signatures

- 2 x TNF α Signatures
- 1 x TP53 Signature
- 1 x TRAIL Activity
- 1 x Apoptosis Pathway Signature
- 1 x Autophagy Pathway Signature
- 1 x Apoptosis Enrichment Score

Immortality

5 signatures

- 4 x Senescence Signatures
- 1 x Telomerase Signature

clara^T Cohort Report:

The clara^T Cohort Report and interactive heat map simplifies visualisation of expression levels across a range of the most relevant published multigene signatures allowing for quick and easy interpretation of results relating to each Hallmark of Cancer.

Supplementary files are also included in the report and are hyperlinked within each profile for additional data functionality.

Advantages of the clara^T Cohort Report:

- Discover patterns of gene expression within your cohort
- Identify unique molecular subgroups within your dataset
- Determine groups of consensus gene expression signatures
- Highlight any differences or unexplained anomalies between samples

Client Information & Cohort Demographics

Customer Cohort ID: _____

clara^T Project ID: ADX _____

Total No. of Samples: _____

Date Samples Received: (DD/MM/YYYY)
n.g. 01 JAN 2019

Histology of Primary Disease: _____

Site of Collection: Primary Metastatic

No. of Samples: _____

Sample Format: FFPE FF Blood Cell Lines

No. of Samples: _____

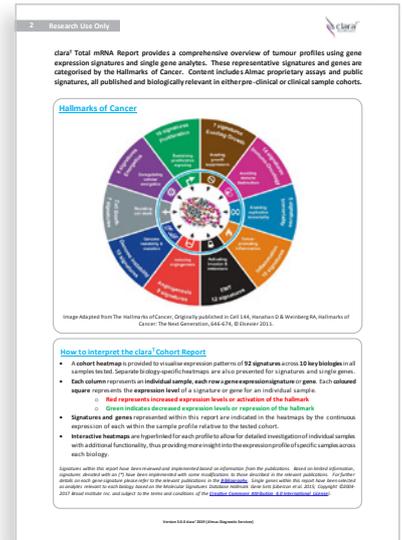

Client Contact: _____

Company/Institute: _____

Customer Support: If you require any further information, or customer gene profiles, Almac Diagnostic Services clara^T Customer Support can be reached on 020 3633 7975 (9am-6pm GMT, 7 days per week) or sales@claradiagnostics.com

Research Use Only: This information provided within this report should not be used for diagnostic or prognostic purposes, including predicting responsiveness to a particular therapy.

Version 3.0.0 clara^T 2019 (Almac Diagnostic Services)

3 Research Use Only

Cohort Summary Profile [Click Here for Interactive Heatmap](#)

Customisable cluster labels to facilitate subgroup identification

Includes an interactive heat map

Dendrogram for clustering interpretation

Green indicates lower expression or repression

Red indicates increased expression or activation

Includes supplementary files with summarised scores for all signatures

Each row represents a signature

Each column represents a sample

Samples represented by columns and RNA expression signatures represented in rows. Each coloured square indicates the expression of the multi-gene signature for that particular sample. To retrieve additional genomic profiles for the cohort, refer to the [Supplementary Interactive HTML Heatmaps](#) and [Supplementary Data Files](#). Coloured labels on the y-axis represent the corresponding Hallmark of Cancer as depicted in the Hallmarks of Cancer image on page 2: **Angiogenesis**, **Cell Death**, **EMT**, **Energetics**, **Evading Growth**, **Genome Instability**, **Immortality**, **Immuno-Oncology**, **Inflammation** and **Proliferation**.

Version 3.0.0 clara^T 2019 (Almac Diagnostic Services)

clara^T benefits:

Maximises the understanding of your data set - Enables you to instantly find the most important patterns from your RNA-Seq data that will inform your research going forward.

Provides readouts for the most relevant published gene expression signatures - Easy-to-interpret gene expression scores are displayed in the report for the most important signatures published in leading cancer journals. Providing instant information on how they perform in your dataset.

Standardises comparisons between different datasets - By providing reproducible Hallmark classifications in an automated fashion, data analysis is standardised across multiple cohorts, removing variation between different discovery approaches.

Highlights consensus between multiple gene expression signatures - The ability to simultaneously visualise multiple different gene expression signature readouts enables a consensus analysis approach resulting in greater confidence in data interpretation.

Provides extensive supplementary data for more innovative analysis - The supplementary data files allow researchers to spend less time on routine exploratory analysis. Allowing additional focus on novel insights through integration of signature outputs to analytics tools and clinical databases, facilitating more innovative biomarker research.

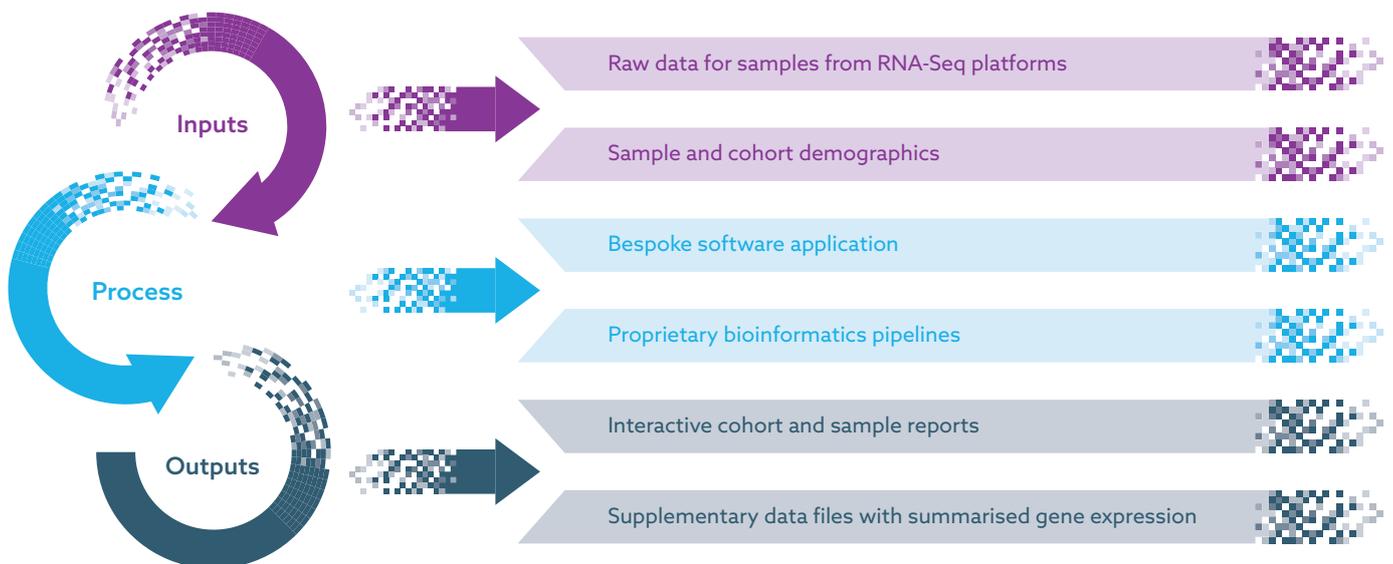

Multiple signatures from a single tumour sample - A single sample sent to Almac for profiling, sequenced on an optimised NGS technology platform, with a powerful bioinformatics pipeline producing multiple signature readouts. Saving precious tissue samples, time and cost.

Cost effective solution, saving analysis time - Cancer researchers can benefit from detailed, actionable analysis of RNA-Seq data from the report without investing in additional significant time and resource to perform in-house bioinformatics exploratory analysis.

Cain Diver, Laboratory Scientist

clara^T workflow:

clara^T reports can be generated from samples profiled by RNA-Sequencing at Almac labs or alternatively from gene expression data you may already have generated from your study cohort.

How to order clara^T:

Call | Speak to a Business Development Manager | Contact us online

- Go to the Almac Diagnostic Services' [website](http://www.almacgroup.com/diagnostics)
- Click on the clara^T page and fill in the contact us form
- One of our **Business Development Managers** will be in touch to discuss your requirements
- Almac Diagnostic Services will send a quotation based on your specific requirements
- If proceeding, complete the scope of work and sample manifest, sign the T&Cs and return to claratsupport@almacgroup.com
- A primary point of contact will be assigned to you for the duration of your project

Want to know more about how clara^T can help your biomarker discovery and translational research?
